

CSP451 CheckPoint 1 - Version Control with Git and GitHub

A static web project created for CSP451 (DevOps and Cloud-Adjacent Topics) at Seneca Polytechnic. This project demonstrates the fundamentals of Git version control, GitHub repository management, and professional development workflows.

Description

This project is a simple static website built to practice:

- Local Git repository setup and commit history
- GitHub repository creation and management
- Feature branch workflow with pull requests
- Professional Markdown documentation

Technologies used: HTML5, CSS3, JavaScript, Git, GitHub CLI

Installation

Prerequisites

- A web browser (Chrome, Firefox, Edge, or Safari)
- Git installed on your machine
- GitHub CLI ([gh](#)) installed

Steps

1. Clone the repository:

```
git clone https://github.com/AiNaikk/CSP451-CheckPoint1-Naik.git
```

2. Navigate into the project folder:

```
cd CSP451-CheckPoint1-Naik
```

3. Open [index.html](#) in your browser - no server required.

Usage

- Open [index.html](#) directly in any browser to view the page.
- Useful Git commands while working on this project:

```
git status                # see what files changed
git log --oneline --graph --all  # view commit history
git checkout -b feature/branch-name # create a new feature branch
git push -u origin feature/branch-name # push branch to GitHub
```

Contributing

1. Fork this repository or create a feature branch:

```
git checkout -b feature/your-feature-name
```

2. Make your changes and commit using **Conventional Commits** format:

```
git commit -m "feat: describe what you added"
git commit -m "fix: describe what you fixed"
git commit -m "docs: describe documentation changes"
```

3. Push your branch and open a Pull Request on GitHub.
4. Wait for review and approval before merging.

Commit types: `feat` `fix` `docs` `style` `refactor` `test` `chore`
